Writing content is something that holds a lot of people back from making money online. Content makes the web go round, but it can be awfully discouraging if you don't enjoy writing or can't find the time to write.

Thankfully, there is a great solution for you! You can leverage the work of other people without paying them a dime. In fact, these people WANT you to use their content on your blog. This is an amazing, little-known plugin for Wordpress that you can start using today.

Basically, there are thousands of users out there using a service called [Unique Article Wizard \(UAW\)](#). I can't tell you exactly how the service works from the inside because users of UAW must agree to a Non-Disclosure Agreement. Even so, I can say that the Wizard helps users construct unique articles with very little effort. It then submits **unique versions** to a wide variety of directories...and your website once you set it up!

Why Publish Unique Article Wizard Content?

You might be a little bit wary of this if you've run into things like content spinners and automated blog postings before. It's true that there is a lot of junk out there that produces terrible content that no one would want to sit and read. [UAW](#) is different!

Here are some top reasons why the Wizard is different than anything you might have come across before:

1. **The content is human edited and reviewed** - When you use content spinners and other automated products the end result is generally pure garbage. There is no human element to what comes out. When you accept UAW articles on your blog you can rest assured that a real live human has reviewed the original article for quality and that the end result will be just as readable and well written as the original.
2. **The content you'll receive on your blog is unique** - The really cool this is that even though the Wizard started with one article, it "magically" creates unique copies of hundreds of that article. That means that when you accept articles on your blog they will be unique and you won't have any trouble with duplicate content penalties from the search engines.

3. **You'll be getting fresh content** - Everyone knows that Google loves fresh content. When you get UAW articles on your blog you will be getting up to the minute information on a consistent basis. From my experience, all UAW content is almost instantly indexed in Google!
4. **It's free!** - This one is a little bit hard to believe, but it's true. You can get this plugin for free, and receive the articles for free. It's like you have your own little content factory that works on making you money, and you don't have to lift a finger after it's set up or pay a dime.
5. **It is available in almost any niche** - There are a lot of people who submit their articles to UAW because they want the backlinks and they want people to see what they've written. That means there are a wealth of articles you can have sent to your blog covering nearly any niche topic.

At this time of writing, you can even **receive Video, Audio and Images embedded in the articles!**

You have full control over this. You can choose which type of media you do or do not want to receive. You can choose where they display on your site (ie left, center or right), You can choose the size of the videos, and the colors and font size of the captions.

Having multi-media on your site will significantly improve your visitor's experience which will, hopefully, result in more of them coming and more of them staying! It will NOT however eat up your bandwidth as the videos and audio files are hosted on remote locations, not on your own server. Images ARE stored on your own site.

Why You Can Attract Highly Targeted Search Engine Traffic With Unique Content Blogs

One of the main reasons I want to create [UAW](#) blogs is attracting traffic in my niche from search engines, **by leverage others' content.**

Pure, unique, original content.

Blogs are great for SEO (search engine optimization) purposes. We all know that Google loves blogs.

The more UAW blogs you create, the more traffic you attract.

You can start up by adding an [UAW](#) blog on your existing sites, especially mini sites with single sales pages.

You link back to your main sites on the blog, and use your main keywords as the anchor texts.

In this way, you can increase your search engine ranking for your main sites, or resurrected your previous good rankings for your old sites.

"Another nice benefit of the new blog is that the blog itself is getting some additional traffic from Google, even though the blog does not have any external links directly to it. Google is applying the authority of the site itself to the blog. Since the *site* is well-linked, the blog is given a bit of "trust" by Google and is appearing in the search results as well."

Install UAW Plugin on Your Wordpress Blog

If you haven't installed Wordpress plugins before it might make you a little nervous. That's why I've put together this screenshot tutorial to make it as painless as possible for you.

Of course, the first thing you need to do is download the plugin. You can find it at the following link:

<http://www.uniquearticlewizard.com/wordpress.html>

As you scroll down the page, you'll notice this box:

Since you are installing the plugin on a Wordpress blog you'll want to select the file that is named "uaw_wordpress_2_0_8.zip"

Right click on the link, and save the zipped folder to a save place on your hard drive.

Installation from this point on is simple. There are only nine steps to go until everything is set up to start receiving content from Unique Article Wizard.

1. Unzip the zipped file you have just downloaded onto your hard drive.

You will need an unarchiving utility (such as [Winzip](#)) to do so.

2. After you've unzipped the folder and made sure all the files are there you need to open up an FTP (File Transfer Protocol) application such as [Filezilla](#) (it's free!)

You'll need to enter in your FTP login information, which generally includes the domain name and password you have on your host, and port 21.

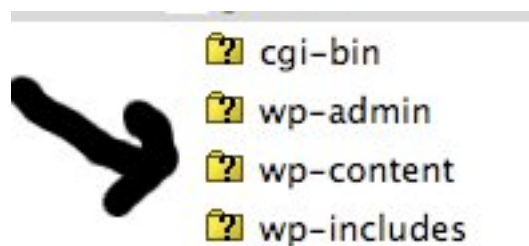

Next, you'll need to find the site's folder you're going to install the plugin on. For example, if my site were dogs.com, I would want to find the dogs.com folder listed there.

If you're using Filezilla (or most other FTP programs) you should also locate your unique_articles plugin that is stored on your hard drive. You should be able to click through the files that represent your computer (it is generally on the left side of the split screen, with one side being your computer and the other being your web host's files)

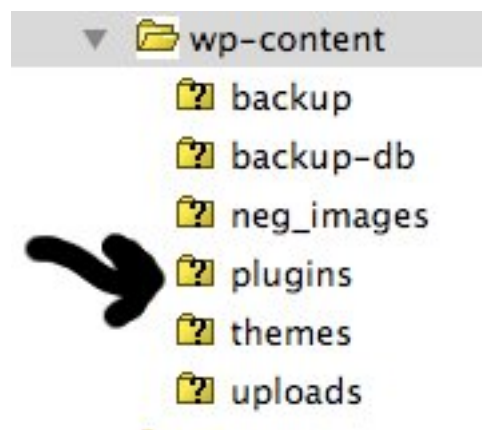

NOTE This tutorial assumes that you have Wordpress already installed on your domain.

Filename	Filesize	Filetype	Last modified
..			
unique_articles		Folder	09/06/2008 16:..
.DS_Store	6,148	File	09/06/2008 16:..

Since you have your website files opened up on the other side of the application (where the website files are shown) you should locate the folder named "wp-content."

Click on the file to open up the contents. The next folder you want to find is called "plugins" the full directory will look like "wp-content/plugins/"

You want to upload the entire unique_articles folder into that plugins directory for your domain. If you're using Filezilla that simply means dragging the unique_articles folder over to the plugins folder on the other side.

So, if your article directory where you want to receive the articles is located at www.yourdomain.com this folder should appear as www.yourdomain.com/wp-content/plugins/unique_articles. As long as you see "unique_articles" now listed under plugins, you've done everything correctly.

3. Now you need to change the permissions for a few files. This allows for the articles to get sent to you, and for you to make certain changes for the plugin.

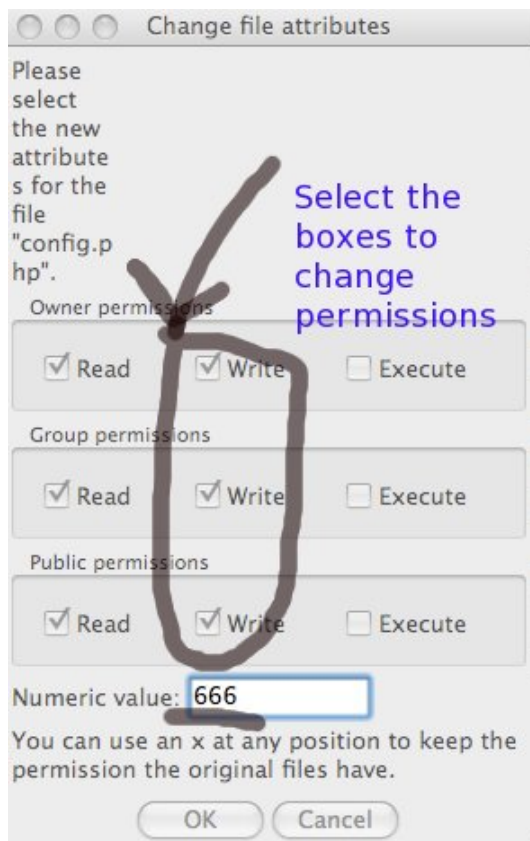

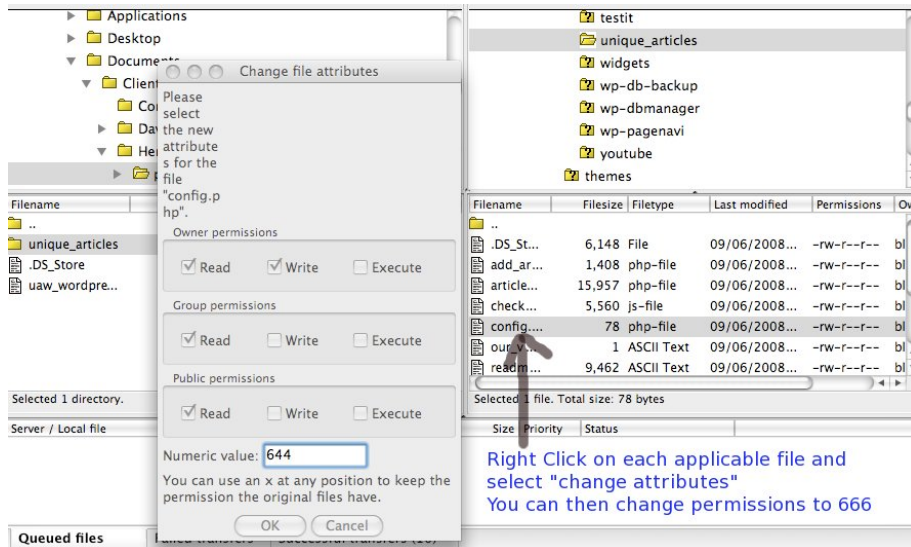

The files you'll want to change include:

- config.php
- version.txt
- unique_articles.php
- article_mods.php

The permissions are currently set at 644 and you want them to be set to 666.

Simply click on the unique_articles folder to open it on the FTP client. You should see the files inside expand. Then, right click on each file that you want to change in turn. Select "change attributes" by clicking on the unselected "write" radio buttons that are currently not selected.

You should see the numbers below change from 6-4-4 to 6-6-6

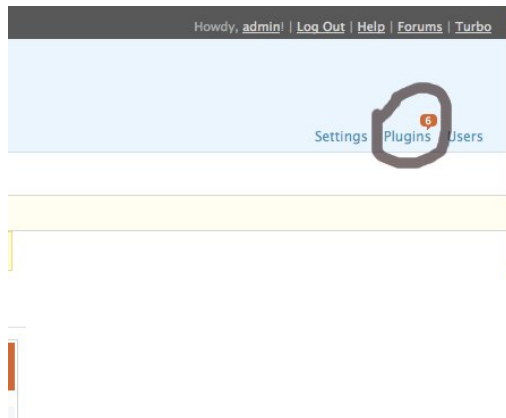

Once you have done step 5 below you can change the permissions for config.php back to 644 if you wish. (However, you will need to put it back at 666 any time you do another update, such as changing your categories on your blog. Keep in mind that the other two files need to be kept at the 666 permanently)

4. Now you need to log in to your Wordpress side by going to the admin

control panel.

After you've logged in you need to find a tab labeled "plugins." It should be in the upper right hand corner. (This tutorial assumes Wordpress version 2.6, 2.5 and lower may be in a different location.)

Click on plugins to bring up the plugin control area. Scroll down to find a list of plugins that have not been activated. You should find unique_articles listed there.

Click on the link that says "Activate."

If you've done it successfully, you can scroll up to the top and see:

Plugin activated.

5. Finally, you should click on the "Settings" tab at the top of the page

After you've clicked on that you should see "UAW-Control" listed as a menu item below.

Click this to be taken to the control panel for the plugin where you can select your preferences.

Unique Article Wizard Control Panel
Version 2.0.8

Enter your preferences below, choose the categories for which you want to receive articles, and press the **Update** button. To test it is all working, just click the **"Update & Test"** button and you will immediately receive a test submission. NOTE: when you press the "Update & Test" button your preferences WILL be updated. "Reset" restores your settings to what they were when you completed your last update – this is mainly used if you get mixed up changing your category selections. For further help, just hover over any of the question marks or check the [plugin FAQ](#)

Check this Box to Start Receiving Unique Articles

Your Email (Used only for important announcements, eg security or upgrades – no spam, no sales pitches.)

First Name

Last Name

Maximum Articles Per Day? (?)

Automatically Publish Articles?
(leave unchecked to have them posted as Draft) (?)

Prefix for Div Class
(default is 'uaw') (?)

Use Wordpress Tags? (?)

Include Unique Article Link? (?) [Your UAW user name: \(?\)](#)

Your Website Name: (?)

Email Notification Address (leave blank for no email) (?)

Email Subject Line (helps with filtering your emails) (?)

For example, you can set a limit on how many articles you receive each day. You can also choose to have an email notification when you receive an article.

Then, you can either delete or approve that article just by clicking a link in the email. This is a great option if you have a niche site that receives few articles.

Beware: the most important part is how you set up to receive articles by blog categories.

I urge you to receive articles on related topics to build a theme

based blog, so that you attract very targeted traffic.

Now you're all done! You can start receiving easy, automated content that the search engines will love. Nothing's better than getting hands off content!

Adding Ping List

One of the best ways to spread the unique content from your Wordpress blog is by adding an RSS ping list. This ping list is basically a list of URLs which will be notified every time you publish a new post or page.

In order to add a ping list, simply go to the “Settings” and then the “Writing” section of your Wordpress dashboard.

You will see a text box which allows you to insert your ping list. By default, there should be a single ping URL in there provided for you.

Update Services

When you publish a new post, WordPress automatically notifies the following site update services. For more about this, see [Update Services](#) on the Codex. Separate multiple service URLs with line breaks.

Now you can add the following ones on to the list and click “Save Changes”:

<http://rpc.pingomatic.com/>
<http://api.feedster.com/ping>
<http://api.my.yahoo.com/RPC2>
<http://api.my.yahoo.com/rss/ping>
<http://www.blogdigger.com/RPC2>
<http://www.blogshares.com/rpc.php>
<http://www.blogsnow.com/ping>
<http://www.blogstreet.com/xrbin/xmlrpc.cgi>
<http://coreblog.org/ping/>
<http://ping.blo.gs/>
<http://ping.feedburner.com>
<http://ping.syndic8.com/xmlrpc.php>

<http://ping.weblogalot.com/rpc.php>
<http://www.popdex.com/addsite.php>
<http://rpc.blogrolling.com/pinger/>
<http://rpc.technorati.com/rpc/ping>
<http://rpc.weblogs.com/RPC2>
<http://topicexchange.com/RPC2>
<http://xping.pubsub.com/ping/>
<http://api.my.yahoo.com/rss/ping>
<http://api.moreover.com/ping>
<http://rpc.icerocket.com:10080/>
<http://pingqueue.com/rpc/>
<https://phobos.apple.com/WebObjects/MZFinance.woa/wa/pingPodcast>
<http://rpc.britblog.com/>
<http://services.newsgator.com/ngws/xmlrpcping.aspx>
<http://www.holycowdude.com/rpc/ping/>

Now every time you posted a new post, these sites will get notified and come to crawl your new post. So your blog will be indexed in search engines super fast!

On the other hand, you don't want to over ping and get "ping spam" penalties. I use this WordPress plugin to make sure I don't over ping.

MaxBlogPress Ping Optimizer

<http://wordpress.org/extend/plugins/maxblogpress-ping-optimizer/>

So in this way you won't double ping with your ping list.

How to Monetize the Unique Content Blog Traffic

You see, we attract free search engine traffic by setting up UAW blogs. It's **highly targeted traffic in your chosen niche**, so don't waste the traffic by placing lots AdSense ad blocks.

TECHNIQUE #1: Building Niche Email List.

I personally monetize the traffic by redirect them to my squeeze pages, collect the leads and build my list.

I also put opt-in forms on the blog at the end of each post.

*A recent study by Aweber shows that over **24%** of web signups to their blog newsletter come from forms at the end of posts.*

About the Author:

Alex Wu runs a [business classifieds](#) website that lets people post their ads, build profiles, and connect. He hopes to create an active environment for businesses place their [business classifieds](#).

Subscribe No Scam, No-Hype Internet Marketing Newsletter to Boost Your Online Profits for Free!

First Name:

Email:

[Click Here to Subscribe!](#)

Please ensure you provide a valid email address, other than Yahoo, Hotmail or MSN because we're currently having problems sending emails to them. Thank you.

Your information will never be sold or shared with anyone ... NEVER!
I respect your privacy and hate SPAM too!

The idea behind this is that if someone reads to the end of an article (especially if it's a long one), s/he must have been particularly interested with the content.

So you can see they want more information after reading the article.

Then they see your opt-in form, and subscribe your newsletter ***without hesitation!***

This tactic is so powerful that can ***greatly expand your email list.***

TECHNIQUE #2: Attract Free Targeted Traffic On and On

I don't place AdSense ads on those blogs. Instead, I use [RealTrafficExchange](#).

With [RealTrafficExchange](#), you earn credits with every click you deliver, by

placing their AdSense-style textual ads on your blog:

Chris Rudolph's internet marketing blog

Uni Classified Ads

Advertise your products or services to university students for Free.
www.unibuysell.com

RealTrafficExchange

Their ads are keywords-targeted just like Google AdSense, so people are willing to click them because it delivers ads that are contextually relevant to your audience.

And their exit-pop and screen shaking techniques make RTE ads have a much higher click-throughs than any other text ads exchange programs, so you earn more traffic.

It's the only free **1:1 ratio click exchange program** I know. And because visits are by choice and not forced, you receive real unique visitors.

In this way, you **get free targeted traffic on and on**, by utilizing your unique content niche blogs.

The more clicks you deliver, the more credits you earn.

In RTE admin panel, you can set up your own ads and use the credits you earn to advertise your own niche blogs to get traffic on and on, promote a squeeze page to build a list, or just direct traffic to a sales page/affiliate presell page to earn some quick cash.

ad	category	status	views	clicks	ctr	
Free Exit Traffic Grabber Download	Marketing/Online Business	live	50392	59	0.12%	pause edit
Free Exit Grabber Software Recycle Your Exit Traffic for Profits with Unblockable Pop-ups						
Free Opt-In Revolver Software Download	Marketing/Online Business	live	44392	54	0.12%	pause edit
Free List Optin Split-Test Script Analyze, Track & Improve Your Email Marketing Performances						
Free AdSense Site Builder Download	Marketing/Online Business	live	97633	672	0.69%	pause edit

The ads you set up are keywords targeted so you get really targeted visitors.

And you only cost credits when people actually click your ad and visit your link, no matter how poor your CTR is.

My Secret Resources to Promote Your Unique Content Blogs

Even though UAW articles get indexed fast because they are fresh and your blog is constantly updated you'll still want to promote them to help bring in the most income.

You have a few different options. One choice is to write a bunch of articles and submit them to directories. This option can bring in great results, but isn't very fun if you don't enjoy writing.

Thankfully, there are easier methods out there.

[Fire Pow](#) - The all-in-one blogging traffic software

One amazing tool you can use is [Fire Pow](#). Now, this is different than anything you've seen before. It will help you to instantly set up your blogs and plugins (not UAW, however). It also contains premium themes that would otherwise cost you a lot of money.

What you should concern yourself with, however, are the amazing promotional features that can help catapult your blog way up in the search engines.

What makes me exciting is, there is an automated social bookmarking software included in [Fire Pow](#)!

If you've ever tried to manually bookmark your sites you know how time consuming it can be.

You can set every time your blog make a new post, it automatically put your new posts up on dozens of social bookmarking websites. The best part is that this is so automated, you don't even have to check the sites after to see if your posts are showing up there!

You can gain a ton of backlinks, which can equal amazing search engine rankings.

[Fire Pow](#) also offers a way to submit your RSS feed to services to get you fast indexing.

If you choose the premium membership option you'll even get the opportunity to post your links on high page rank blogs. Instead of wasting money and time buying links on other people's sites, you can put your links on designated ones at will! It's not uncommon for a Firepow site to do very well, simply because there are so many promotional tools at your disposal.

There you have it! It's very easy to get a Unique Article Wizard blog up and running that can nearly run on its own. Or, you can choose to just give yourself a break on a blog you usually write the content for. When you combine the UAW plugin with incredible promotional tools you can start pulling in some really great income.

[UniqueArticleWizard](#)

Yeah, you read that right, you promote your own unique content blogs by advertising on tens of thousands of other UAW blogs!

You use this very service to submit your own version of unique articles to other unique content blogs, along with all the top article directories, announcement lists, and ezine publishers.

The whole network has been well established over time, and spread out over a vast number of different IP addresses.

[UniqueArticleWizard](#) automatically creates a schedule for your posts with link back so that they're published on an on-going basis - rather than "suddenly", all at once.

Your links grow naturally, gradually.

I've personally use their service for 7 months and I get great results. UniqueArticleWizard is the one that you really need to check out.

[Shareapost](#) - Blog syndication gone viral

Shareapost is a free service that can get you more backlinks to your blog inner posts, **automatically**.

You can submit your WordPress blogs to Shareapost and allow other users to post the content of your posts to their own blogs, while also linking back to your original blog post.

This is GREAT for getting tons of links to each quality blog post on your blog.

Simply submit your feed and add ShareAPost to your Ping list in WordPress, and before you know it you'll have a swarm of folks linking back to your blog posts.

Now, you KNOW what that will do to the ranking of your posts, right?

This will have a great impact on your inner blog post rankings.

You can pick the keywords that the other blogs link back to you with as well. Simply use Technorati-style tags in your blog posts and ShareAPost will automatically pick those keywords up make sure the blogs that republish your posts link back to you.

How does it make sure that those blogs link back to you? Because ShareAPost DOES THE POSTING.

Using WordPress' built-in XMLRPC technology, ShareAPost creates the post and submits it to the other blogs in seconds with link back to you.

The Final Thoughts

95% of the people who read this report will never give it a try. You may be the exception. If you are, you will see dramatic results. Before you know it, you'll be at a whole new level.

Remember, every dollar you earn today is more valuable than a dollar you earn tomorrow. If you make just one dollar online, you're already ahead of a lot of people that are trying to make anything.

Just take action today!

If you have any questions, comments, suggestions or whatever - please don't hesitate to get me at my blog:

<http://HenryZeng.com>

look forward to hearing from you!

All the best,

Henry Zeng
